

Compact Rotatable Speaker

Dimensions: 180 × 90 × 35 mm

Purpose: Designed for online meetings and casual movie watching in bed

This compact speaker was created to provide clear, directional sound in a small form factor. Built using four high-quality SONY satellite drivers, chosen for their excellent voice reproduction, it offers an ideal solution for both personal and small-group audio experiences.

The speaker's unique design allows all four drivers to rotate independently. This flexibility makes it perfect for various scenarios: in meetings where the drivers can be aimed outward so that sound reaches everyone around the table. At home, it can rest stably on a quilt while delivering immersive audio during movie viewing from a laptop or tablet.
